A1859-TX
Dual cure epoxy adhesive: UV-Heat cure adhesive

PRODUCT DESCRIPTION:
- Base chemistry: epoxy only, cationic polymerization
- One component adhesive ready for use, solvent-free, UV and/or heat curing, thixotropic, milk-paper white color.

PRODUCT USE:
- Active alignment of components for optoelectronics and semiconductor packaging
- Module bonding with active alignment: example: bond image sensor to board or bonding VCM to lens barrel.
- Bonding of opaque substrates

FEATURES:
- Epoxy only, low thermal cure temperature with short cure time, UV tackable (fixable) with LED-365nm then heat cure to complete cure cycle, high adhesion, high Tg, long working life, excellent reliability performances, robust for solder reflow process

INSTRUCTIONS FOR USE:
1) Clean the substrates to remove contamination, dust, moisture, salt and/or oil
2) Dispense adhesive on substrates
3) Bond substrates (with active alignment – optional)
4) UV cure to fix alignment or to bond
5) Thermal cure: to cure adhesive in shadow area and to improve adhesion of bonded parts

CURING CONDITIONS: 2 curing ways: UV + heat or heat
1) UV + Heat curing: both UV and heat are used in the curing process
   First step: UV cure
   *Metal halide/Mercury UV: UV-A (320-400 nm), intensity: 100-1,000 mW/cm²
   *or LED-365 nm, UV light intensity: 200 to 1,000 mW/cm²

   Second step: heat cure: the adhesive is exposed to UV light first, then heat cure 90 °C for 60 minutes

2) Heat curing: heat is the only curing source, the adhesive sees no UV light
   - 90°C for 90 minutes
   - 95°C for 60 minutes
   - 100°C for 60 minutes

   The adhesive is expected to be cured in the absence of air or sandwiched between two substrates if the adhesive surface is exposed to ai during cure, surface stickiness might result.
   - The actual heat cure time is dependent on the heating time of the bonded components. The time to heat up the components must be added to the total cure time of the adhesive for the process
   - The effect of humidity is greater for very thin film, if the adhesive layer is <10 µm, then longer cure time might be needed
   - To ensure good curing speed, the humidity should be <60% RH
   - Epoxy adhesives have post cure properties. Adhesion strength should be conducted at least 24 hrs after part assembly.

   The maximum adhesion strength is achieved by HEAT cure. For best adhesion, UV fix cure should be kept at a minimum and the majority of the bonded components should be cured by HEAT

TYPICAL PROPERTIES

**Liquid**
- Viscosity at 25 °C, mPa.s or cps (shear rate: 10/s) 88,000 to 94,000
- Thixotropic index (shear rate: 1/s over 10/s) 5
- Density (g/mL) 1.3
- Shelf life (-40 to -20°C): 6 months
- Pot life or working life (20 - 25°C): 48 hours

**Cured film**
- Appearance of cured adhesive: light yellow to tan
- Outgas, weight % (per Telcordia GR-1221) 0.01
- Outgas, weight % (per MIL-STD 883/5011) 0.01
Cured film properties (continued)
Water permeability (g/m² 24 hrs, 50 °C/95% RH, 75 µm film) 2.2 x 10⁻⁴
Shrinkage (volume, %) 1
Hardness, shore D 75-80
Glass transition temperature (DMA, °C) 161
Coefficient of thermal expansion (DMA)
  below Tg (x10⁻⁶), °C⁻¹ 32
  above Tg (x10⁻⁶), °C⁻¹ 100
Physical properties tested at 25°C, 50% RH (ASTM D638)
  Tensile strength, MPa 125
  Elongation (%) 6
  Young’s Modulus, MPa 1,640

Operating temperature, °C -40 to 150

GENERAL USAGE INFORMATION:
Shipment: adhesive is shipped in cold pack

Storage: After receipt, cold storage at -20 °C or -40 °C in the original container is required

Before use: The cold adhesive needs to reach RT (20-25°C) before use. The container needs to sit at RT, adding heat is not allowed. Room temperature equilibration time is dependent on container size, but a 10-30 gram syringe equilibration time is approximately 30-60 minutes. Condensed water on the container must be removed prior to use

SAFETY AND HANDLING
The uncured adhesive can be cleaned from apparatus with isopropyl alcohol (IPA), methyl ethyl ketone (MEK), acetone or commercial alcohol based cleaning solution. Avoid direct skin and eye contact. Use only in well ventilated areas. Use protective clothing, gloves and safety goggles. Read Safety Data Sheet before handling.
